GENERIC AI COMPANIONS DON'T FIT

Cultural mismatch — Most companion apps default to Western or romance-first framing.

Regulatory risk — Romance-oriented AI chat carries real compliance concerns in the Gulf.

No real alternative — Few options offer genuinely respectful, MENA-grounded storytelling.

FOUR ORIGINAL, CULTURALLY-GROUNDED CHARACTERS

Kaysan the detective, Omar the mentor, Elizit the young leader, and Layla the storyteller-scholar — each speaking fluent Modern Standard Arabic, each with a built-in guardrail redirecting any romantic or flirtatious dialogue back in-character. Storytelling and mentorship, not romance, by design.

TOOLS USED

BUILT WITH

Frontend — Lovable, with Lovable Cloud for accounts and persistence

Character art — Original designs, generated and refined for each character

AI Behavior — Per-character system prompts with enforced non-romantic guardrails

GUARDRAILS BUILT IN, NOT BOLTED ON

Every character — including future user-created ones — inherits the same non-romantic guardrail by default. Age-gated at sign-up. No confidential or intimate-chat framing anywhere in the product.

WHAT'S NEXT

WHERE THIS GOES

More characters — Expanding the original cast across more genres

Dialect — Exploring Khaleeji dialect for a future, more casual character

Community — User character creation, with the same guardrails preserved
